Discover the Power of LED

1. People actually read LED messages; being conditioned to reading LED messages at airports, cinemas, roads and train stations.
2. Clearly visible day or night; legible at greater distance than similar-sized static signs.
3. Change messages, at no charge, whenever required. (Static signs cost money to change.)
4. LEDs are reliable, low maintenance, 'Solid State' devices (not globes) that have a long life span of over 100,000 hours. LEDs run on low voltage and use little power, meaning BIG savings on power bills.

Computronics

Established in 1976, Computronics has progressed to become one of the world leaders in the design and manufacture of LED electronic displays.

- A public company (ASX-CPS)
- Inhouse R&D
- Products built to World's Best Standards
- Service technicians available nationwide
- 2 year warranty for parts and service - extended maintenance agreements are available
