

BUILDING DIRECTORIES

Computronics Building Directories combine an elegant high tech look with being ultimately functional.

The Building Directory system can get updated information and tenant listings instantly from a local or remote location (flexibility for building owners and managers). Additional features include short term messaging, maintenance notices, meeting room occupancy and special events.

Electronic Directory Systems add a unique feature to the venue by utilising LED displays against conventional aluminium slat directories or monitors.

The main directory can be complemented with sub directories in lift areas, corridors and alternative entry points providing continuity of directional information.

The Building Directory System can be configured in varied brightness options to suit any lighting conditions. They are available in a range of finishes and designs to compliment any décor or architectural finish limited only by your imagination.
